

iMap Adult Services

iMap provides individualised care and support to adults with autism, learning disabilities and complex health and communication needs.

Adult Care Homes

Our adult care homes offer individually planned care packages to provide 24 hour care and support to service users. Plans are drawn up in liaison with service users, their families, social workers and associated professionals to make sure that the support offered matches a service users needs. iMap offers regular individual and group therapy sessions dependent on personal needs. All therapy sessions have clear long and short term aims and objectives and are regularly monitored and reviewed. Sessions include developing basic communication skills, language skills, speech sounds, functions of language and non-literal comprehension of language.

Supported Living and Domiciliary Care

We provide a range of domiciliary care and supported housing accommodation to help individuals plan and gain their independence. Our highly skilled staff can be available 24 hours a day as required, as we work with families and other professionals to design individually tailored support packages for each of our service users. iMap staff are dedicated to keeping service users safe and healthy whilst assisting them to develop daily living skills, manage finances and maintain their emotional wellbeing. Our aim is for all of our service users to be supported to get the most from life. Again, we are able to offer regular individual and group therapy sessions dependent on an individual service user's needs.

Outreach

iMap will work as part of a team to individually tailor an outreach support programme to meet the needs of the service user. We are able to offer transition focused support, assistance to access the community and family support, as well as offering behavioural support and guidance to assist parents and carers to support the individual service user.

Identifying the Right Support Package

We believe that it is essential that we are able to identify the right services to meet the individual needs of all of our service users. We complete a range of assessments that help us to work with families and professionals to identify what support and care is required, so that we can deliver the right support in the right way, at the right time. We understand that to offer the most effective support to our service users we need to promote excellent partnerships with parents, carers and professionals and we welcome the opportunity to work with you to develop the best possible support package for iMap service users.

individuals **Making autism positive – The iMap Approach**

iMap's person centred care planning approach takes careful consideration of the requirements of each service user's needs as identified within the social work assessment, and any other relevant assessment that identifies the care, support and therapeutic needs of a service user. This enables iMap to provide enhanced opportunities for children and adults to improve communication and relationships, continually develop independence skills and assist people to lead fulfilling lives and achieve the best possible outcomes.

iMap promotes an Intensive Interactive approach, so that all staff are trained and familiar with different techniques for working successfully with complex learners. We emphasise communication and empathy for service users and by drawing on SCERTS, PECS and Intensive Interactions staff within all of our supported living and residential care environments are able to provide structure, calmness and clarity to each service user to reduce their anxiety and promote their learning and development.

iMap provides:

- Intensive Interaction focused support to service users
- A SCERTS® informed approach to assist service users to build competence in Social Communication, Emotional Regulation and Transactional Support
- A total communication approach to speech and language therapy, including use of PECS, Makaton and social stories
- Music therapy
- Art therapy
- Multi-sensory experiences
- Behavioural support programme, informed by PROACT-SCIPr-UK® behavioural support techniques
- In house medical support and health liaison.
